

The next-generation SailTimer Wind Instrument™

- Wireless (easy to install).
- Solar-powered.
- Submersible.
- No base unit required.
- For sailboats of all sizes, from centerboard racing dinghies to keelboats.
- Small and portable with standard 1/4" tripod / Gorillapod / GoPro mount.
- Vertical design - no bird perch.
- Works with rotating masts.
- Maintains accuracy when sailing heeled over.
- The only masthead anemometer in the world that transmits wind speed & direction directly to mobile devices.
- Also works in the winter: our advanced battery continues to hold power and accept a charge down to -40 degrees (C/F).
- Data in standard NMEA 0183 format works with many apps.
- Accessory for wiring in to NMEA marine electronics.
- Wind direction equally sensitive all the way around; no dead band at the end of the rotation as in wind direction sensors with potentiometers.
- 9-axis motion sensor with accelerometer, gyroscope and digital compass is right in the tail of the wind direction arrow.
- Amazing optional mount allows you to raise/lower the anemometer after your boat is in the water, without having to take down or climb up the mast.

Precision fit. Built to last. The perfect orchestration of moving parts.
